

DynamicDuo SERIES SWITCHES

DATASHEET

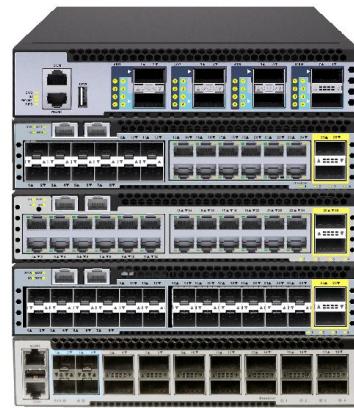

Flexible Campus and Enterprise Switch

Version: V1.4

Release Date: 2025/12/17

Product Overview

The DynamicDuo Series switches are designed on a domestic popular switch chip, which is called VastLakes and BigFlow Series Chip platform with 10G/25G/40G/100G high speed ports and rich features, these switches will perfectly meet the requirements of Campus, Enterprise, Data Center, and SDVoE networks.

Key features of the DynamicDuo Series Switches

- Built-in SDVoE API Server simplifies user operation steps.
- Supports the implementation of physical dual-machine redundancy in 1U space, reducing the user's usage cost.
- MLAG which can build an Active-Active system to improve the reliability of the network links from single board grade to device grade.
- Supports Precision Timing Protocol.
- Rich L2/L3 features like IPv6, OSPF, BGP, PIM, etc.

The DynamicDuo Series switches provide various power supply solutions for customers choosing, fixed single power supply, and redundant hot-swappable power supplies (AC and DC are both available). The fan solutions also have 1 bay with field replaceable fan modules and built-in fans. Generally, air flow of DynamicDuo Series is front to back (AFO), and some models can do customization of back to front (AFI) airflow.

● Visual WEB GUI

HOS allows users to quickly configure common configuration items using a visual WEB GUI, which lowers the application threshold for users.

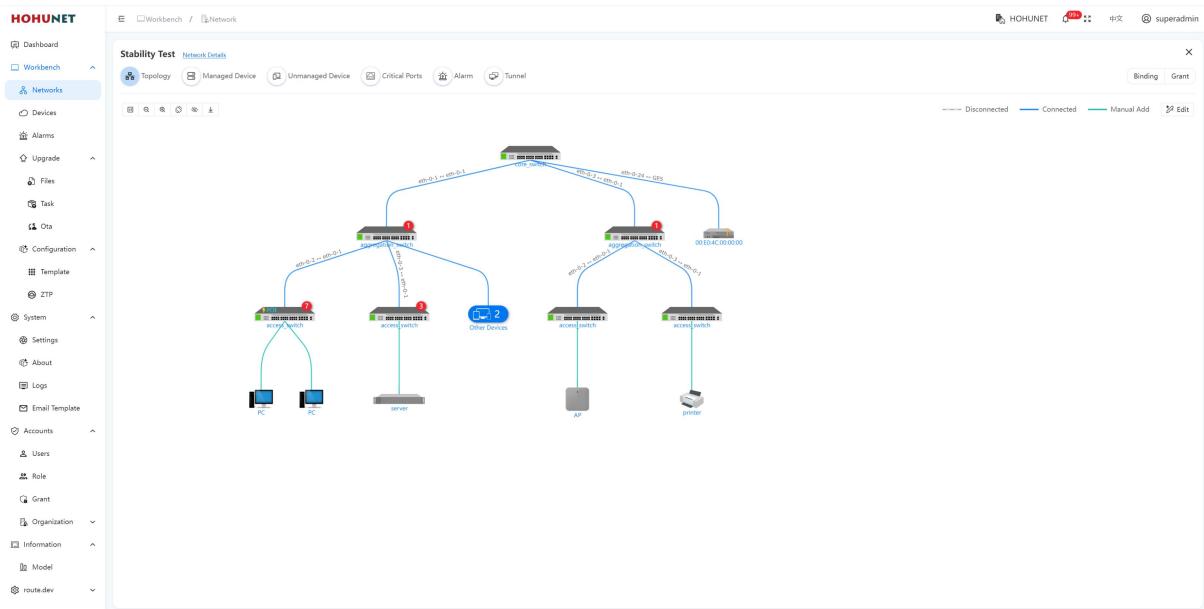

Moreover, SDVoE switches built-in SDVoE API Server, users no need to purchase additional SDVoE controller, simplifying the network architecture. The web page is simple and easy to operate, without complicated steps, only the following three simple parts: SDVoE, Multicast, DHCP Server, you can complete the relevant configuration of SDVoE, and reduce the overall time cost and project cost of users.

- Outstanding management features

The DynamicDuo Series switches support varied management ways, include console port / in-band network ports / out-of-band network port. Support SNMP v1/v2/v3, Support CLI (Command Line Interface), web management, Telnet and FTP connection. Support OAM to make management more convenient, and support SSH2.0, etc. to ensure security of management.

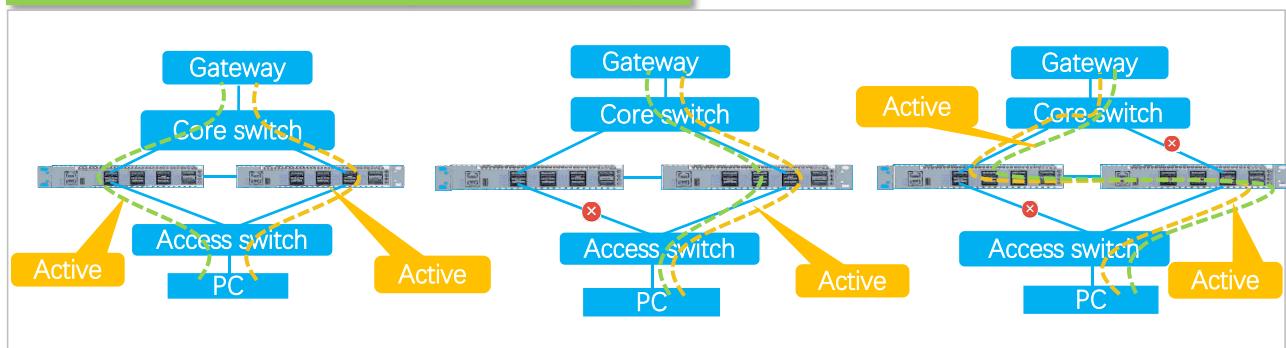

Moreover, leveraging its profound technical expertise and in-depth understanding of campus and enterprise networking needs, Hohunet has launched the Da Hu Cloud Management System (DHCS). It enhances network management and maintenance efficiency, reduces costs, elevates management intelligence, and delivers a faster, smarter, more secure and reliable network to better meet user requirements.

- Support MLAG Active-active dual-system hot backup

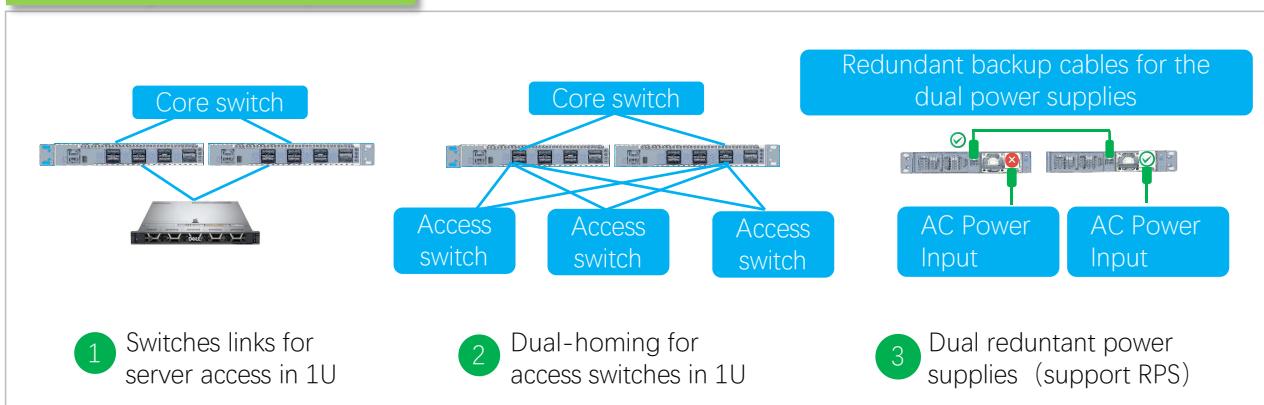

Support MLAG (Multi-Chassis Link Aggregation) to aggregate links across different devices. MLAG can build an Active-Active system to improve the reliability of the network links from single board grade to device grade. MLAG use a peer link between two devices to aggregate two devices and make them as one device logically. Ports of two different devices join the aggregate ports together and all port can transmit the data traffic. MLAG need to manage the device respectively, but the configurations are easier than stacking, reboot is NOT required after MLAG is configured. Forwarding and configuring are processing on local device, in normal condition the traffic do NOT transmit through the peer link, the bandwidth of peer link is not the bottleneck of the network and the latency is low.

MLAG Active-active dual-system hot backup

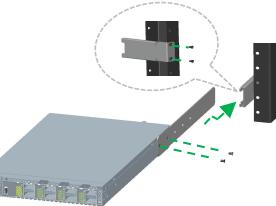

- Supports Multiple Dual-system Physical Hot Backup
